

FAQs

What is Omnilux CLEAR?

Based on the world's leading Omnilux Medical™ light therapy technology, CLEAR is an FDA-cleared flexible, portable, affordable home-use device that uses red and blue light emitting diodes to reduce or eliminate mild to moderate acne and reduce the appearance of redness and inflammation.

How does it work?

Optimized energy output and two clinically proven wavelengths of light (red 633nm and blue 415nm) work on a cellular level to kill acne-forming bacteria in the sebaceous glands.

Is it safe?

Over 40 clinical studies and nearly 20 years of experience have proven that Omnilux light therapy is safe for all skin types, with no pain and no downtime. Omnilux CLEAR generates no heat or UV light and is safe for all persons over 14 years of age.

What is the treatment regimen?

We recommend a course of treatments: 4 10-minute treatments per week for 6 weeks. Once the initial series is complete, use Omnilux CLEAR at the earliest signs of a breakout.

Can I use Omnilux CLEAR with my current skincare products?

Omnilux CLEAR is compatible with most skin care routines, however we do not recommend using your device in conjunction with Accutane or retinol products. We recommend speaking with your prescribing physician before using the Omnilux CLEAR with prescribed products.

The Omnilux CLEAR Difference:

- Clinically proven to reduce mild to moderate acne, calm redness and inflammation, soften the appearance of acne scarring and clear breakouts faster
- Drug-free, pain-free and long lasting
- Based on the gold standard Omnilux Medical technology, the brand preferred by skin care professionals worldwide for nearly 20 years
- The only medical grade, FDA-cleared home-use light therapy device for acne

Users Love it!

My skin is NOTICEABLY less red, the inflammation of my breakouts is significantly reduced... and my breakouts clear 3-5 days faster than they do on their own. I know this will be something I rely on for as long as I continue to have acne prone-skin

— Amy, Omnilux CLEAR user.

**Tough on Acne.
Gentle on Skin.**

Your skin in a whole new light

Medical-Grade, Designed for Home Use

From mild breakouts to moderate flareups, acne can be frustrating. Take control of your acne, and experience the relief and confidence of clear, healthy skin with gold-standard Omnilux technology in the comfort of your own home.

The Problem

Acne develops when the sebaceous glands in the skin produce excess oil. This oil combines with cells that line the gland walls, clogging the skin's pores.

Normal skin bacteria colonize these pores causing the inflammation and redness that we associate with acne. The bacteria responsible for this inflammation (known as P.acnes), produces natural chemicals called porphyrins, which are sensitive to the wavelengths (colors) of light used by Omnilux CLEAR.

The Omnilux CLEAR Solution

The blue wavelength (415nm) neutralizes the bacteria that cause the redness and inflammation associated with acne. Combined with the anti-inflammatory properties of red light (633nm), Omnilux CLEAR helps eliminate or significantly reduce active acne breakouts.

Clinically-Proven. FDA-Cleared.

Omnilux is the brand of professional light therapy devices preferred by dermatologists and skin care professionals worldwide since 2003. Now this proven technology is available to treat troublesome acne in the comfort and convenience of your home.

Clinically-Proven Benefits:

- Reduces active acne and blemishes, redness & inflammation
- Reduces and helps soften the appearance of acne scarring
- Helps clear breakouts faster
- All natural, no pain, side effects or downtime

To Use:

Four 10-minute treatments per week for 6 weeks. Once the initial series is complete, use the device at the earliest signs of a breakout.

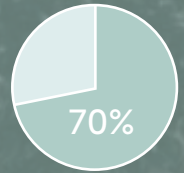

After 2 treatments per week for 4 weeks using Omnilux technology. Photo courtesy of Dr. E. Cintolesi

The results are visibly smoother, clearer skin, a more even skin tone, less pigmentation, and a reduction of acne.

Real Results

In clinical studies, Omnilux has been shown to reduce or eliminate acne in nearly all participants. In fact, on average, participants achieved a 70% clearance of acne after 4 weeks of twice weekly Omnilux use.¹
